

Data and analysis

Terms	Illustrations	Definitions
Analysis of data		To make statements about a set of data based on interpretation of the results.
Average		The average is known as the number typical of a set of numbers. It is also used as another term for the mean.
Axis		A fixed, reference line from which locations, distances or angles are taken. Usually grids have an x axis and y axis
Bar chart / Bar graph		A bar graph (also bar chart) is a graphical display of data using bars of different heights. They can also be displayed horizontally.

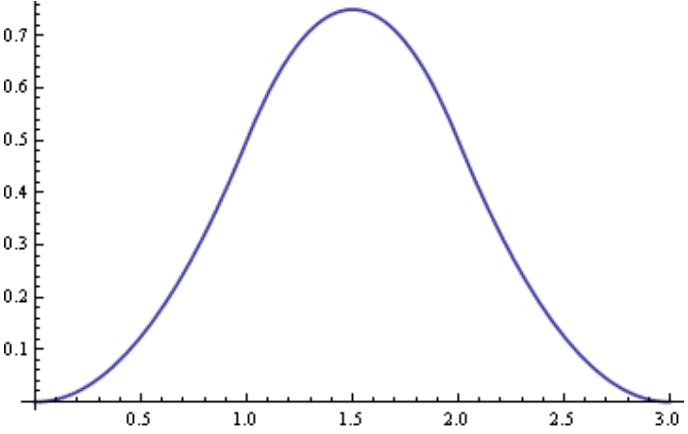

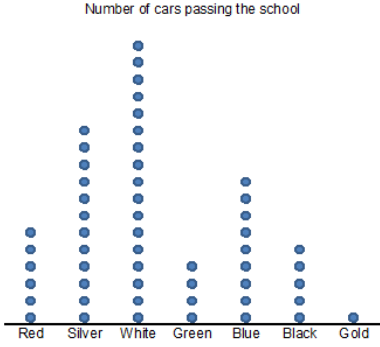

Data and analysis

	<table border="1"> <caption>Number of cars passing the school</caption> <thead> <tr> <th>Colour of cars</th> <th>Frequency</th> </tr> </thead> <tbody> <tr> <td>Red</td> <td>6</td> </tr> <tr> <td>Silver</td> <td>12</td> </tr> <tr> <td>White</td> <td>17</td> </tr> <tr> <td>Green</td> <td>4</td> </tr> <tr> <td>Blue</td> <td>9</td> </tr> <tr> <td>Black</td> <td>5</td> </tr> <tr> <td>Gold</td> <td>1</td> </tr> </tbody> </table>	Colour of cars	Frequency	Red	6	Silver	12	White	17	Green	4	Blue	9	Black	5	Gold	1	
Colour of cars	Frequency																	
Red	6																	
Silver	12																	
White	17																	
Green	4																	
Blue	9																	
Black	5																	
Gold	1																	
<p>Bias</p>		<p>A 'false' or 'invalid' result e.g. when collecting data on Scottish people's favourite supermarket, it would be biased if you conducted the research outside a certain supermarket as it could encourage them to say the one they have just been in to.</p> <p>A systematic built-in error which makes all values wrong by a certain amount, e.g. Always measuring own height wearing shoes with thick soles.</p>																
<p>Carroll diagram</p>	<table border="1"> <thead> <tr> <th></th> <th>Can Fly</th> <th>Cannot fly</th> </tr> </thead> <tbody> <tr> <th>Mammal</th> <td>Bat</td> <td>Elephant Horse</td> </tr> <tr> <th>Bird</th> <td>Pigeon Eagle</td> <td>Ostrich Penguin</td> </tr> </tbody> </table>		Can Fly	Cannot fly	Mammal	Bat	Elephant Horse	Bird	Pigeon Eagle	Ostrich Penguin	<p>A two way table used for grouping items according to characteristics.</p>							
	Can Fly	Cannot fly																
Mammal	Bat	Elephant Horse																
Bird	Pigeon Eagle	Ostrich Penguin																

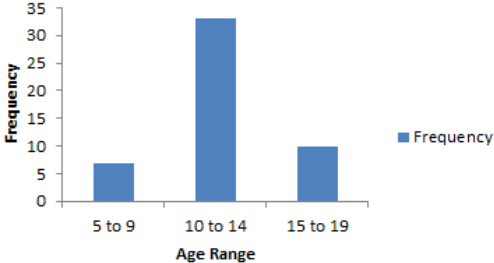

Data and analysis

Census		When data is collected for every member in a group.
Certainty		The probability that an event will definitely happen.
Chance	<p>Examples of chance</p>  <p>There are 11 balls in this box.</p> <p>The chances of pulling out a red ball is $\frac{4}{11}$</p> <p>The chances of pulling out a yellow ball is $\frac{4}{11}$</p> <p>The chances of pulling out a blue ball is $\frac{1}{11}$</p> <p>The chances of pulling out an orange ball is $\frac{2}{11}$</p> <p>It could be estimated from the calculated chances that;</p> <ul style="list-style-type: none"> • There is an equal chance of pulling out a red or yellow ball • You are most likely to pick out a red or yellow ball • You are least likely to pick out a blue ball 	<p>The number of times an event is likely to happen compared to the number of times it could happen.</p> <p>For example;</p> <p>There is a 1 in 6 chance of throwing a 3 on a dice labelled 1-6. It is likely to happen once as there is only 1 number 3 on the dice but it could happen 6 times.</p>
Consequences		<p>The impact a decision can make on yourself and on others. For example; Reading food labels when shopping for the family – The majority of the food items state it is high in sugar, fat and calories. If this food is eaten each night, consequences for the family may be tooth decay long term, gradual weight gain etc.</p>
Continuous data		<p>Continuous data is measured and can be any value within a range <i>e.g. the length of a leaf.</i></p> <p>The time taken to run a race is continuous as all measurements have meaning.</p>

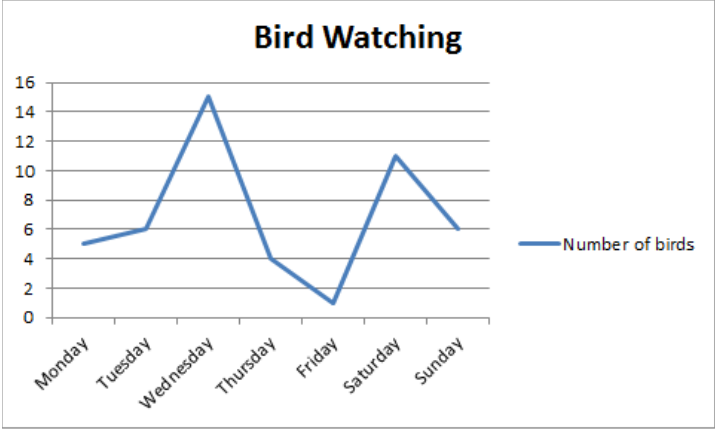

Data and analysis

<p>Data</p>		<p>A collection of facts, such as numbers, words, measurements, observations</p>
<p>Discrete data</p>		<p>Discrete data is counted and can only take certain values - like whole numbers <i>e.g. the number of cars passing by a school.</i></p> <p>Shoe size is an example of discrete data as size 6 and 7 have a meaning however size 6.2 does not.</p>
<p>Distribution</p>		<p>The distribution is a description of the overall shape of the data when displayed graphically.</p>
<p>Dot plots</p>	<p style="text-align: center;">Number of cars passing the school</p> 	<p>A graphical display of data using dots.</p>

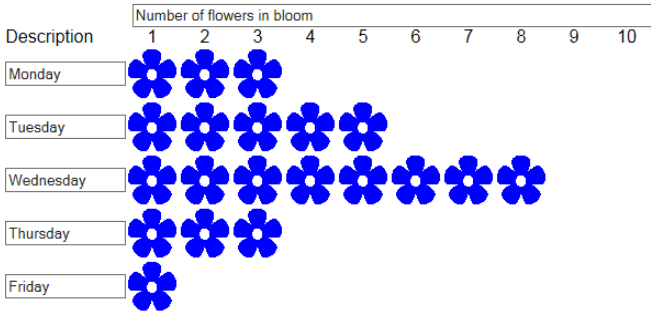

Data and analysis

Draw conclusions		To make statements about a set of data based on results.																											
Event		A single result of an experiment.																											
Frequency table	<table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <thead> <tr> <th colspan="3">Number of cars passing the school</th> </tr> <tr> <th>Colour</th> <th>Tally Marks</th> <th>Frequency</th> </tr> </thead> <tbody> <tr> <td>Red</td> <td> I</td> <td>6</td> </tr> <tr> <td>Silver</td> <td> </td> <td>12</td> </tr> <tr> <td>White</td> <td> </td> <td>17</td> </tr> <tr> <td>Green</td> <td> </td> <td>4</td> </tr> <tr> <td>Blue</td> <td> </td> <td>9</td> </tr> <tr> <td>Black</td> <td> </td> <td>5</td> </tr> <tr> <td>Gold</td> <td> </td> <td>1</td> </tr> </tbody> </table>	Number of cars passing the school			Colour	Tally Marks	Frequency	Red	I	6	Silver		12	White		17	Green		4	Blue		9	Black		5	Gold		1	A table used to note tally marks and show frequencies of each item.
Number of cars passing the school																													
Colour	Tally Marks	Frequency																											
Red	I	6																											
Silver		12																											
White		17																											
Green		4																											
Blue		9																											
Black		5																											
Gold		1																											
Grouped data	For example: Data sorted into classes e.g. 11-15, 16-20.	Data is grouped together into intervals. For example: Data sorted into classes e.g. 11-15, 16-20.																											
Histogram	<p style="text-align: center;">Pupil's ages in a small all through school</p>  <table border="1" style="margin-top: 10px; width: 100%; border-collapse: collapse;"> <caption>Data for Pupil's ages histogram</caption> <thead> <tr> <th>Age Range</th> <th>Frequency</th> </tr> </thead> <tbody> <tr> <td>5 to 9</td> <td>7</td> </tr> <tr> <td>10 to 14</td> <td>33</td> </tr> <tr> <td>15 to 19</td> <td>10</td> </tr> </tbody> </table>	Age Range	Frequency	5 to 9	7	10 to 14	33	15 to 19	10	A graphical display of data using bars of different heights, it is similar to a bar chart but a histogram groups numbers into ranges.																			
Age Range	Frequency																												
5 to 9	7																												
10 to 14	33																												
15 to 19	10																												

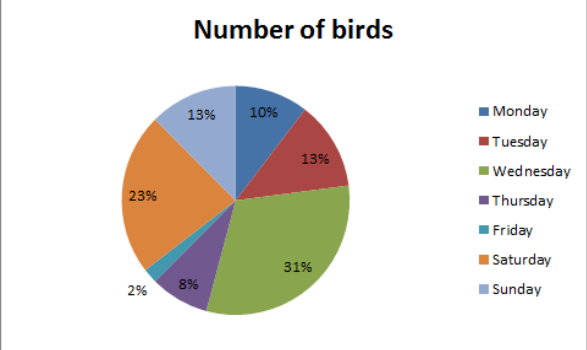

Data and analysis

Labelling		<p>The labels on a graphical representation which give further information about the data.</p> <p>E.g. if gathering data on minibeasts in the school garden, the y axis would be labelled 'number of minibeasts' and the x axis would be labelled 'types of minibeasts'.</p>																
Least common / least popular		<p>The number or item which appears least often in a set of data.</p>																
Likelihood		<p>The chance that an event will happen.</p>																
Line Graph	 <table border="1" style="display: none;"> <caption>Bird Watching Data</caption> <thead> <tr> <th>Day</th> <th>Number of birds</th> </tr> </thead> <tbody> <tr> <td>Monday</td> <td>5</td> </tr> <tr> <td>Tuesday</td> <td>6</td> </tr> <tr> <td>Wednesday</td> <td>15</td> </tr> <tr> <td>Thursday</td> <td>4</td> </tr> <tr> <td>Friday</td> <td>1</td> </tr> <tr> <td>Saturday</td> <td>11</td> </tr> <tr> <td>Sunday</td> <td>6</td> </tr> </tbody> </table>	Day	Number of birds	Monday	5	Tuesday	6	Wednesday	15	Thursday	4	Friday	1	Saturday	11	Sunday	6	<p>A graph that shows information that is connected in some way – such as change over a period of time</p>
Day	Number of birds																	
Monday	5																	
Tuesday	6																	
Wednesday	15																	
Thursday	4																	
Friday	1																	
Saturday	11																	
Sunday	6																	
Make predictions		<p>Use data available to suggest what the future may be.</p>																
Mean		<p>The mean is the average of the set of data – it is the sum of the numbers divided by how many numbers there are.</p> <p>For example: In the set of numbers 5, 5, 6, 7, 8, 12, 13, 15, 16 the mean would be $(5+5+6+7+8+12+13+15+16) / 9 = 87/9 = 9.67$ to 2 d.p.</p>																

Data and analysis

Median		<p>The median is the middle value in a sorted list of numbers.</p> <p>For example: In the set of numbers 5, 5, 6, 7, 8, 12, 13, 15, 16 the median would be 8.</p>												
Misleading information		<p>Information which has been adapted by either presentation or selection to give the wrong impression of the true data.</p>												
Mode		<p>The mode is the number which appears most often in a set of data.</p> <p>For example: In the set of numbers 5, 5, 6, 7, 8, 12, 13, 15, 16 the mode would be 5.</p>												
Most common / most popular		<p>The number or item which appears most often in a set of data.</p>												
Pictogram	 <table border="1" style="margin-left: 20px;"> <thead> <tr> <th>Description</th> <th>Number of flowers in bloom</th> </tr> </thead> <tbody> <tr> <td>Monday</td> <td>3</td> </tr> <tr> <td>Tuesday</td> <td>5</td> </tr> <tr> <td>Wednesday</td> <td>7</td> </tr> <tr> <td>Thursday</td> <td>3</td> </tr> <tr> <td>Friday</td> <td>1</td> </tr> </tbody> </table>	Description	Number of flowers in bloom	Monday	3	Tuesday	5	Wednesday	7	Thursday	3	Friday	1	<p>A Pictogram or Pictograph is a way of showing data using images.</p>
Description	Number of flowers in bloom													
Monday	3													
Tuesday	5													
Wednesday	7													
Thursday	3													
Friday	1													

Data and analysis

<p>Pie chart</p>	 <p style="text-align: center;">Number of birds</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Day</th> <th>Percentage</th> </tr> </thead> <tbody> <tr> <td>Monday</td> <td>10%</td> </tr> <tr> <td>Tuesday</td> <td>13%</td> </tr> <tr> <td>Wednesday</td> <td>31%</td> </tr> <tr> <td>Thursday</td> <td>8%</td> </tr> <tr> <td>Friday</td> <td>2%</td> </tr> <tr> <td>Saturday</td> <td>23%</td> </tr> <tr> <td>Sunday</td> <td>13%</td> </tr> </tbody> </table>	Day	Percentage	Monday	10%	Tuesday	13%	Wednesday	31%	Thursday	8%	Friday	2%	Saturday	23%	Sunday	13%	<p>A chart which uses 'pie slices' to show relative sizes of data. The sections of the chart can be recorded in percentages, e.g. half of the pie represented 50% of the data collected.</p>
Day	Percentage																	
Monday	10%																	
Tuesday	13%																	
Wednesday	31%																	
Thursday	8%																	
Friday	2%																	
Saturday	23%																	
Sunday	13%																	
<p>Predictions</p>		<p>An educated guess at future events based on past experiences. E.g. predicting the weather in December.</p>																
<p>Probability</p>		<p>How likely something is to happen – calculated as the number of times an event actually happened divided by the number of possible events. It can be expressed as a fraction, decimal fraction or percentage.</p>																
<p>Qualitative</p>		<p>Descriptive information.</p>																
<p>Quantitative</p>		<p>Numerical information.</p>																
<p>Questionnaire</p>		<p>A set of questions used to gather information during a survey.</p>																
<p>Range</p>		<p>The range is the highest number in the set take away the lowest.</p> <p>For example: In the set of numbers 5, 5, 6, 7, 8, 12, 13, 15, 16 the range would be (highest – lowest) $16 - 5 = 11$.</p>																
<p>Raw data</p>		<p>Raw data is the data collected for example in a survey.</p>																

Data and analysis

Robust information		Robust information has been gathered and presented in an appropriate way.										
Sample		A selection taken from a larger group (the "population") so that you can examine it to find out something about the larger group.										
Sample size		The number of pieces of information gathered from the sample in order to represent the whole "population." E.g. 100 men were surveyed to find out how many hours they spent exercising each week. (100 is the sample size).										
Scale		The intervals that are used on a graphical representation of data e.g. a scale which rises in ones or in tens, etc.										
Stem and leaf plots	<p>Data Set: 11, 12, 13, 13, 14, 18, 23, 24, 27, 27, 31, 34, 36, 42</p> <p>Stem and Leaf Plot:</p> <table style="margin-left: 20px;"> <thead> <tr> <th style="border-right: 1px solid black; padding: 2px;">Stem</th> <th style="padding: 2px;">Leaf</th> </tr> </thead> <tbody> <tr> <td style="border-right: 1px solid black; padding: 2px;">1</td> <td style="padding: 2px;">1 2 3 3 4 8</td> </tr> <tr> <td style="border-right: 1px solid black; padding: 2px;">2</td> <td style="padding: 2px;">3 4 7 7</td> </tr> <tr> <td style="border-right: 1px solid black; padding: 2px;">3</td> <td style="padding: 2px;">1 4 6</td> </tr> <tr> <td style="border-right: 1px solid black; padding: 2px;">4</td> <td style="padding: 2px;">2</td> </tr> </tbody> </table> <p style="margin-left: 100px;">Key: 1 2 means 12</p>	Stem	Leaf	1	1 2 3 3 4 8	2	3 4 7 7	3	1 4 6	4	2	<p>A table where each data value is split into a "leaf" (usually the last digit) and a "stem" (the other digits).</p> <p>For example "32" is split into "3" (stem) and "2" (leaf).</p> <p>The "stem" values are listed down, and the "leaf" values are listed next to them.</p>
Stem	Leaf											
1	1 2 3 3 4 8											
2	3 4 7 7											
3	1 4 6											
4	2											
Survey		Gathering information about a certain topic or issue for a particular reason. The information can help people make decisions about topics of interest e.g. most popular holiday destinations for young families.										
Tally Marks		A visual representation of the number of times an item										

Data and analysis

		appears in a set, these are bundled in groups of five. For example: represents 2 and represents 5
Trends		The overall picture of a set of data over time – e.g. the temperature is rising over time. For example: House prices, over time, in the UK have shown an upward trend.
Uncertainty		The probability that an event may not happen.
Vague information		Vague information is information which is presented without using all available information.
Venn Diagram		<p>A diagram that shows all possible logical relations between a collection of sets of data.</p> <p>For example: Appropriate question would be: What are the common multiples of 3 and 4?</p>
